I. Title of the Study

Integrated Web Redesign, Interactive Donor Platform, and Automated Donation Tracking System for The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc.

This study addresses the dual-organizational scope between The Conroy Rendon Charitable Trust in the UK and its primary local implementation partner, Lifenet Children's Foundation Inc. in Cagayan de Oro City. The project focuses on modernizing their online web presence, creating interactive donor engagement features, and automating transaction tracking across all care and outreach programs.

II. Introduction

Non-profit organizations and social welfare agencies rely heavily on transparent, engaging, and modern digital platforms to connect with international supporters, track incoming contributions, and maintain daily operational transparency. When an organization's public web presence is outdated and financial tracking is handled manually, donor engagement drops and administrative workloads increase significantly.

The Conroy Rendon Charitable Trust (UK Registered Charity No. 1114903) works in direct partnership with its primary local partner in the Philippines, Lifenet Children's Foundation Inc., which is a licensed non-profit social welfare agency situated in District 4, Agong Canitoan, Cagayan de Oro City, Misamis Oriental. Together, these organizations manage essential social welfare initiatives, including the House of Joshua residential care home for orphaned, abandoned, and neglected children aged 8 to 18 years old; the Bridgeway Transition Care program, which supports young adults completing college education; the Growing Hope community outreach educational assistance program; and the Compassion In Action disaster and crisis response team.

Since Lifenet was founded in 2008 and the Trust was established in 2012, the reach of these combined ministries has expanded significantly across Cagayan de Oro City. However, their online web presence spread across an older UK Trust website and a separate Lifenet Wix site has remained static and visually obsolete. The current site layouts fail to showcase the modern scale

of their work, lack interactive features to keep site visitors engaged, and result in low online donation conversion rates. Furthermore, contribution management relies heavily on manual administrative logging. Local staff members in Cagayan de Oro must manually verify bank receipts, match donor identities, and trace specific funding allocations (such as child sponsorships, school supply kits, or general operational support). This manual process creates work backlogs, increases the risk of accounting errors, and delays financial reporting between local administrators and trustees in the UK.

To resolve these operational challenges, this study proposes an Integrated Web Redesign, Interactive Donor Platform, and Automated Donation Tracking System. The project will deliver a unified, modern web portal designed to elevate brand identity, engage prospective donors through dynamic sponsorship tracking, and automate donation transaction logging into a central database.

III. Statement of the Problem

The overall operational reach, donor engagement, and financial management of the partnership between The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc. face severe challenges due to fragmented online systems and manual record-keeping.

Specifically, the organization faces the following key problems:

1. Outdated Visual Identity & Fragmented Web Presence – The existing websites still use layout structures dating back to 2012, which fail to showcase the growth and current operations of Lifenet Children's Foundation Inc. and The Conroy Rendon Charitable Trust effectively.
2. Low Visitor Engagement & Poor Donation Conversions – Lacking interactive progress indicators, live sponsorship updates, or clear program stories for the House of Joshua and Growing Hope programs, the current websites fail to convert site visitors into regular sponsors or supporters.
3. Inability to Track Program-Specific Allocations – The current web pages lack an integrated donation portal that allows donors to specify which program their funds should

support (House of Joshua, Bridgeway, Growing Hope, or Compassion In Action), limiting transparency and donor preference.

4. Manual and Error-Prone Financial Record-Keeping – NGO administrators in Cagayan de Oro must manually trace incoming donations, match deposit slips with donor names, and physically record them in spreadsheets, leading to data backlogs and potential errors.
5. Delayed Cross-Border Reporting Between Local Staff and UK Trustees – Because operational and financial logs are recorded manually on local spreadsheets, sharing updated figures with trustees at The Conroy Rendon Charitable Trust in the UK is slow, hindering financial auditing and strategic planning.

Specifically, this study aims to answer the following research questions:

1. How can the web redesign unify and modernize the online identity of both organizations to reflect their growth from 2012 to the present?
2. How can interactive donor platform features improve visitor engagement and donation conversion rates?
3. How can the automated donation tracking system organize, record, and centralize donor profiles, timestamps, payment methods, and target program allocations?
4. How can an administrative management dashboard improve cross-border reporting efficiency between Lifenet staff in Cagayan de Oro and trustees in the UK?
5. How can the proposed platform improve the security, accuracy, and accessibility of donor transaction records?

IV. Objectives of the Study

General Objective:

To design, develop, and implement an integrated web redesign, interactive donor platform, and automated donation tracking system for The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc., improving donor conversion rates and streamlining administrative financial record-keeping.

Specific Objectives:

1. To gather and analyze the system requirements, manual tracking challenges, and website limitations through interviews and survey questionnaires with Lifenet CDO staff and stakeholders.
2. To modernize the user interface (UI) and user experience (UX) of the organization's web pages into a responsive, mobile-friendly platform that unifies messaging for both entities.
3. To build interactive donor engagement features, including active child sponsorship progress indicators, project updates for the House of Joshua and Growing Hope programs, and intuitive online donation forms.
4. To develop an Automated Donation Tracking Module that automatically records donor details, transaction timestamps, payment methods, and program choices into a centralized database.
5. To construct an Administrative Management Dashboard that enables local staff in Cagayan de Oro and UK trustees to search, filter, and export transaction logs and financial summary reports in real time.
6. To implement role-based security access for System Administrators, Local NGO Staff, and Public Visitors/Donors.
7. To evaluate the functional performance, usability, data accuracy, and reliability of the platform through User Acceptance Testing (UAT) with local staff and trial donors.

V. Significance of the Study

The proposed platform will provide substantial benefits to the following key stakeholders:

Trustees & Lifenet CDO Administrators – Replaces manual paper and spreadsheet tracking with an automated database log, streamlining cross-border financial reporting and saving administrative time.

Donors & Child Sponsors – Provides a modern, simple, and transparent platform to donate, select specific beneficiary programs, and view real-time progress updates for the children they support.

House of Joshua & Program Beneficiaries – Benefits directly from increased, sustainable funding enabled by better online outreach, clear program visibility, and higher donor conversions.

Lifenet Outreach Personnel – Allows community workers in Cagayan de Oro to spend less time on manual office paperwork and more time delivering direct services through Growing Hope and Compassion In Action.

Researchers – Enables the student research team to apply full-stack web development, UI/UX prototyping, database normalization, and agile management to a real-world non-profit setting.

Future IT Researchers – Serves as a technical reference for future academic studies focused on non-profit web engineering, donor management platforms, and automated donation tracking systems.

VI. Scope and Delimitation

Scope:

Unified Front-End Web Platform: A responsive, mobile-friendly website unifying information, news, and media for both The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc.

Interactive Donor Module: Features such as active child sponsorship showcases, dynamic progress counters for community drives, and interactive program stories (House of Joshua, Bridgeway, Growing Hope, Compassion In Action).

Automated Donation Tracking Engine: System-generated transaction logs capturing donor profiles, payment channels, transaction IDs, timestamps, and target project allocations.

Administrative Management Dashboard: Tools for local CDO staff and UK trustees to search donor histories, filter records, update child sponsorship statuses, and export PDF/Excel summary reports.

User Roles: System Administrator, Local NGO Staff (Lifenet CDO), and Public Visitors/Donors.

Delimitation:

Real-Time Payment Gateway Merchant Accounts: Direct credit card merchant processing will be simulated or limited to third-party integration webhooks (e.g., PayPal/GCash sandbox environments) during the initial testing phase.

Internal NGO Accounting & Payroll: The platform will not handle internal employee payroll processing, staff salary distribution, or tax compliance reporting.

Organizational Limit: The application is developed specifically for the operational scope of The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc. and relies on data provided by authorized users.

VII. Methodology

This study will adopt a Developmental Research approach using the Agile Software Development Methodology. Agile allows the research team to design, construct, test, and refine the web application in rapid, iterative software cycles (sprints), incorporating feedback from Lifenet CDO administrators and trial users.

Development Tools & Tech Stack:

- Frontend Web: HTML5, CSS3, JavaScript (ES6+)
- CSS Framework: Bootstrap 5 / Tailwind CSS
- Backend Framework: PHP using the Laravel Framework
- Database Engine: MySQL
- Database Management Tool: phpMyAdmin
- Local Server Environment: XAMPP
- Development Environment: Visual Studio Code
- UI/UX Design & Prototyping: Figma

Phases of the Research Process:

1. Requirements Gathering – Conducting structured interviews and survey questionnaires with Lifenet CDO staff to map out current manual logging bottlenecks, donor workflows, and site feature requirements.
2. System Design – Creating system flowcharts, Use Case Diagrams, 3-Tier System Architecture, Database Entity-Relationship Diagrams (ERD), and high-fidelity interactive wireframes in Figma.
3. Iterative Development – Building the web application incrementally using Agile sprints. The backend RESTful API and automated transaction logging engine will be built in PHP Laravel, while frontend layouts will use Bootstrap for full mobile responsiveness.
4. System Testing – Conducting unit testing, system integration testing, and functional testing to verify that donation inputs automatically create accurate, tamper-proof database records.
5. System Evaluation – Deploying the platform for User Acceptance Testing (UAT) with local staff and trial donors. The platform will be evaluated based on ISO/IEC 25010 software quality standards focusing on functional suitability, usability, performance efficiency, and security.
6. Implementation & Onboarding – Hosting the finalized application on a live web server, configuring MySQL tables, and providing Lifenet staff with user manuals and system onboarding.

VIII. Review of Related Literature

Development and Assessment of a Mobile-based Information System for Charity Foundations (2023)Darwin C. Mangca · Surigao del Norte State UniversityThis study is closely related to your project. It covers donor profiles, donation records, beneficiary information, and program reports. It can support your discussion of centralized records and charity management.

Sagip Pagkain: A Collaborative Platform for Food Bank Management and Distribution System (2025)Louie Jerome L. Roldan and Archieval M. Jain This Philippine study focuses on coordinating food donations, monitoring inventory, tracking beneficiaries, and improving the

distribution of donated resources. It can support your program allocation and beneficiary monitoring features.

It Is a Match! How Donors and Nonprofit Organizations Come Together on a Matching Donation Platform (2024)Sander, P., and Zabel, J.This study examines matching donors with nonprofit organizations and projects. It is relevant to your system's donor-to-beneficiary linking feature and the importance of trust in online donation platforms.

Orphanoserve: Advancement in Orphanage and Donation Management System Using PHP (2024)Jayakrishnan M. R. and co-authorsThis study discusses a donation management website designed around orphanages and donors. It is relevant to your system's beneficiary records, donation requests, and donor interaction features.

Smart Blockchain Networks: Revolutionizing Donation Tracking in the Web 3.0 (2024)Chaimaa Nairi, Murtaza Cicioğlu, and Ali ÇalhanThis paper examines how blockchain and smart contracts may improve donation tracking, transparency, and accountability. It can support your discussion of donation transaction records and auditability.

IX. Expected Output

The final deliverable will be a fully functional Integrated Web Redesign, Interactive Donor Platform, and Automated Donation Tracking System, featuring:

Modernized Unified Web Portal – A fully responsive web interface presenting joint operations for The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc.

Interactive Donor Engagement Platform – Features including active child sponsorship progress bars, real-time campaign stories (House of Joshua, Growing Hope), and intuitive contribution forms.

Automated Donation Tracking Engine – A backend logging system that records donor names, contact details, payment methods, transaction timestamps, and specific program choices automatically.

Administrative Management Dashboard – A secure management portal for local CDO staff and UK trustees to view real-time transaction feeds, search donor records, filter dispatches, and export PDF/Excel summary reports.

Role-Based Security & Permissions – Distinct access controls for System Administrators, Lifenet Staff, and Public Donors.

User & System Documentation – Comprehensive user guides and technical documentation detailing database schemas, API endpoints, and system maintenance instructions.

The system is expected to modernize the organization's public image, increase online donation conversions, and eliminate manual record-keeping bottlenecks.

XI. Appendices

Appendix A – Consolidated Data

No.	Survey Item
1	Do you experience difficulties in managing and updating the joint web presence and digital information across The Conroy Rendon Charitable Trust and Lifenet Children's Foundation Inc.?
2	Do you experience difficulties in manually recording incoming donations, matching bank deposit slips with donor identities, and tracking specific program allocations (such as the House of Joshua, Bridgeway, Growing Hope, or Compassion In Action)?
3	Do you experience delays or difficulty when compiling financial logs, generating audit reports, and sharing cross-border updates between local staff in Cagayan de Oro City and trustees in the UK?
4	Do you think a centralized, web-based platform with integrated automated donation tracking, interactive sponsorship counters, and a secure administrative dashboard would help improve daily operations and donor engagement?

Appendix B – Use Case Diagram

The Use Case Diagram illustrates how the Admin, Staff, Donor, and Beneficiary interact with the Donation & Beneficiary Management System. It presents the different functions each user can perform, including managing users, program allocations, beneficiary records, child sponsorships, educational records, and donations. It also includes processing one-time and recurring donations, linking donors to beneficiaries, recording academic and health updates, managing posts and media galleries, viewing transaction history, generating reports, and receiving system notifications.

Appendix C – Entity-Relationship Diagram (ERD)

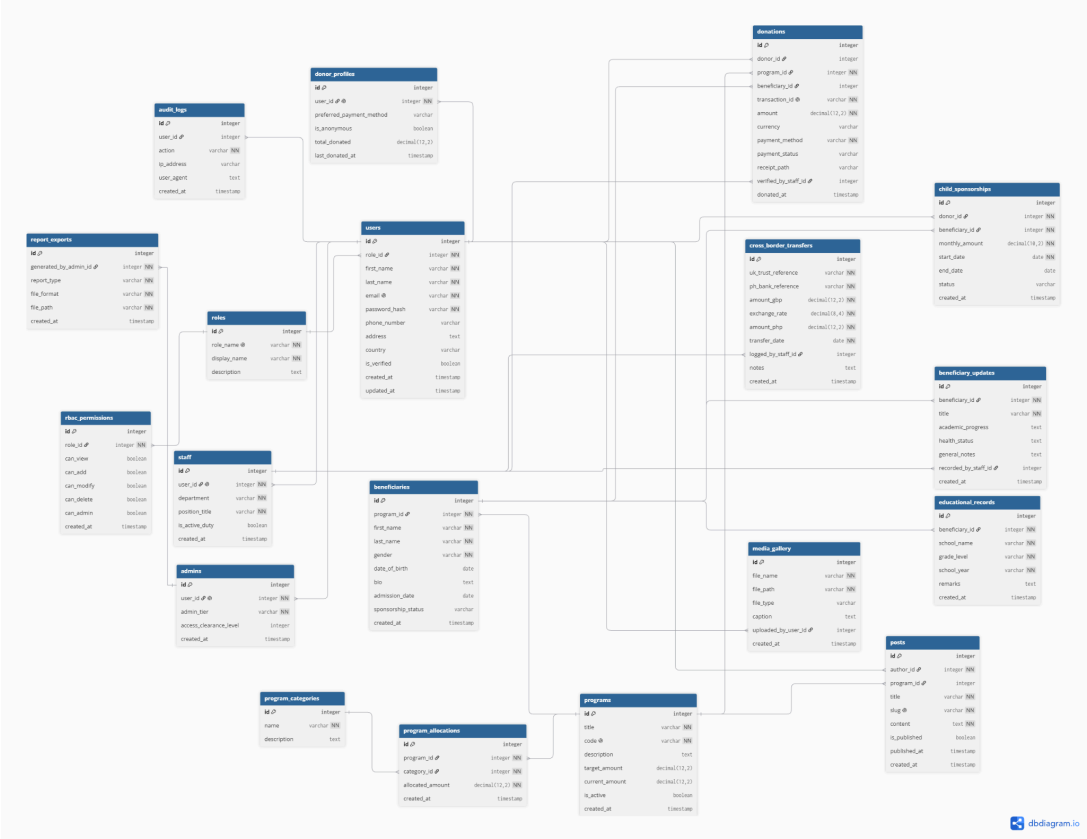

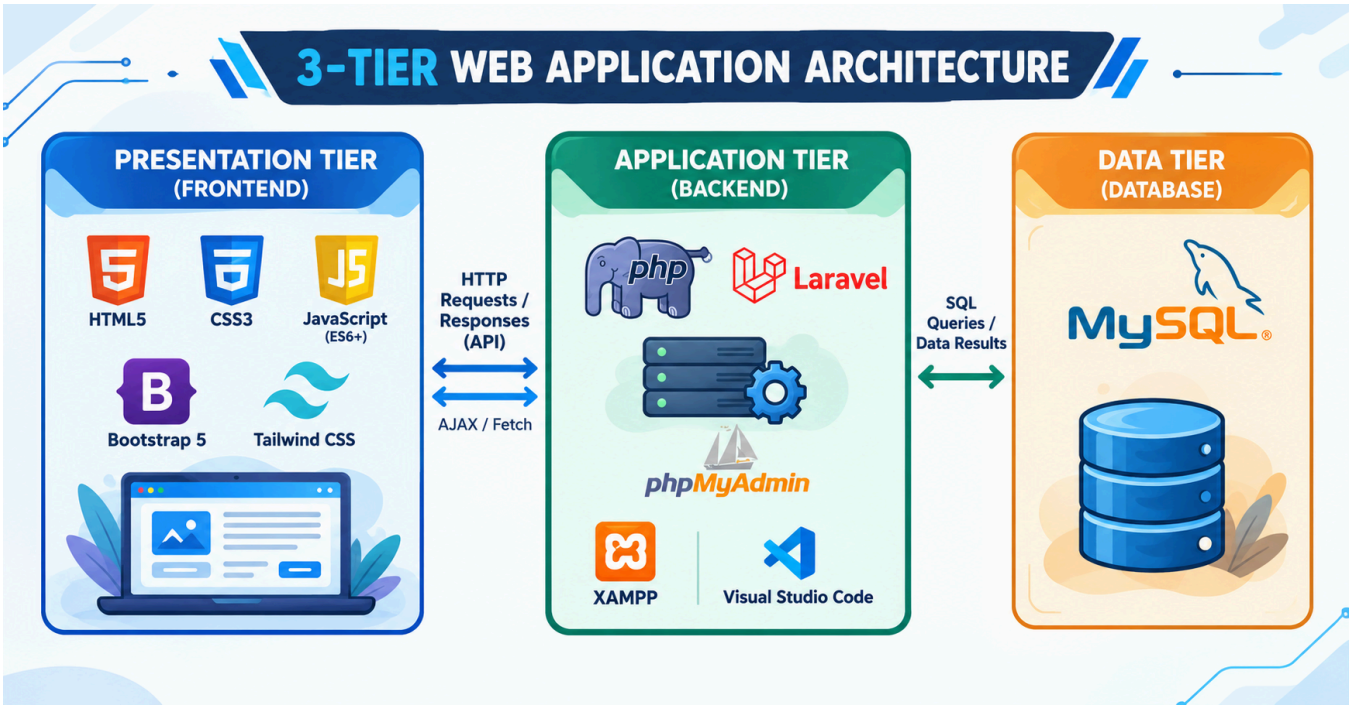

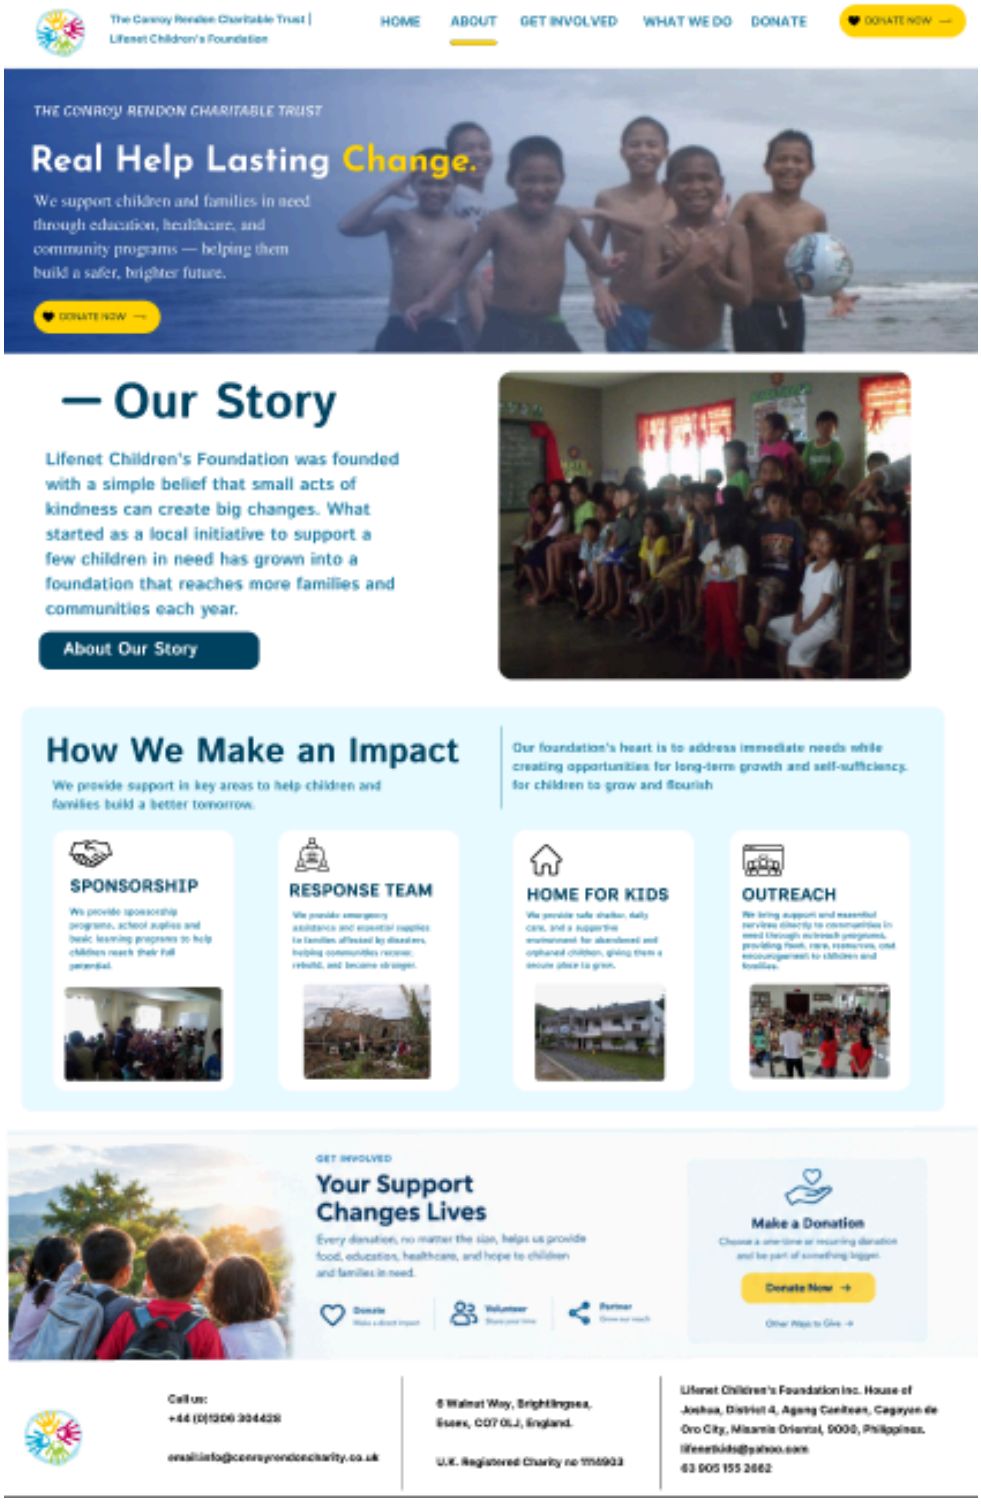

Figure 1

Figure 1.1. The Entity Relationship Diagram illustrates the main database tables of the Donation & Beneficiary Management System, including users, donors, beneficiaries, program allocations, child sponsorships, donations, educational records, academic and health updates, and system notifications. The diagram presents the relationships among tables through their primary and foreign keys, supporting the systematic organization and management of donations, beneficiary information, sponsorship programs, and donation transactions.

— Our Story

Our foundation's heart is to address immediate needs while creating opportunities for long-term growth and self-sufficiency for children to grow and flourish

THE BEGINNING

It Started with a Simple Act of Kindness

Lifenet Children's Foundation was founded with a simple belief: that small acts of kindness can create big changes. What started as a local initiative to support a few children in need has grown into a foundation that reaches more families and communities each year.

Our work began among street children and families, where we provided food, simple wound care, and Bible studies on the sidewalks. What we saw in their lives their struggles, their hopes, and their strength —ignited our commitment to do more.

WHO ARE CHILDREN AT RISK IN CAGAYAN DE ORO?

In Cagayan de Oro City, many children and families face challenges that can affect their safety, education, health, and future. Children living in vulnerable communities may experience poverty, limited access to basic needs, unstable family situations, and other circumstances that make it harder for them to reach their full potential.

Appendix F – Testing Instruments (for later phases)

The System Usability Scale (SUS) Questionnaire Template

The System Usability Scale (SUS) questionnaire template will be used to evaluate the usability, ease of use, and user experience of the proposed Integrated Web Redesign, Interactive Donor Platform, and Automated Donation Tracking System.

Sample Test Cases

Sample test cases will be prepared to validate the functionality of the system, particularly child sponsorship updates, online donation processing (one-time and recurring contributions), program allocation selection (House of Joshua, Bridgeway, Growing Hope, and Compassion In Action), donor history searching, and cross-border report generation. The testing process will assess whether each feature meets specified system requirements.
